

# remotion

Remotion is a framework for **creating videos programmatically using React**.

## Why create videos in React?

- **Leverage web technologies:** Use all of CSS, Canvas, SVG, WebGL, etc.
- **Leverage programming:** Use variables, functions, APIs, math and algorithms to create new effects
- **Leverage React:** Reusable components, Powerful composition, Fast Refresh, Package ecosystem

## Created with Remotion

 <p>"This video was made with code" - Fireship <a href="#">Watch</a> • <a href="#">Source</a></p>	 <p>GitHub Unwrapped - Personalized Year in Review <a href="#">Try</a> • <a href="#">Source</a></p>	<p>View more in the <a href="#">Remotion Showcase!</a></p>

## Get started

If you already have Node.JS installed, type

```
npx create-video@latest
```

to get started. Otherwise, read the [installation page](#) in the documentation.

## Documentation

Documentation: [remotion.dev/docs](https://remotion.dev/docs)

API Reference: [remotion.dev/api](https://remotion.dev/api)

## License

Be aware of that Remotion has a special license and requires obtaining a company license in some cases. Read the [LICENSE](#) page for more information.

## Contributing

Please read [CONTRIBUTING.md](#) to learn about contributing to this project.
